

Scientist Warned Baxter Would Release Plague in Ukraine

NoWorldSystem

November 21, 2009

Bio-scientist Joseph Moshe who was [arrested by the FBI](#) tried to warn the public about Baxter's sinister plan to release a plague in the Ukraine by creating a vaccine bio-weapon that would result in hundreds of deaths.

That is precisely what occurred in the Ukraine, a plague infected 1.5 million people, over 80,000 being hospitalized and leaving 328 dead. The WHO(World Health Organization) claims that the virus running through Ukraine is nothing more than the same [A/H1N1 influenza](#) experienced around the world and that it's not pneumonic plague. Many suspect that this *is* a [bacterial pneumonic plague](#) that is ten-times worse than swine flu influenza that is spread from person-to-person. Reports from the infected say that their lungs tend to have a burning sensation turning them as "black as charcoal".

Joseph Moshe is a bio-scientist working for a unit within Mossad and had dual national (Israeli-American) citizenship, Moshe was later seized for blowing the whistle on Baxter International contacting a radio show and the White House, warning them of the pharmaceutical companies' plot to spread a plague from Baxter's Ukrainian lab. He knew the FBI was bugging his house, so he decided to pack up his things and head for the Israeli consulate where he was met by armed LAPD/SWAT, FBI and the Secret Service surrounding his car. He was pepper-sprayed, tasered and is [now being held in the Patton State mental hospital](#) in California, his next court date is December 25, 2010.

What is not certain yet is how this disease was released to the public, it's certainly not natural. According to local newspapers hundreds of phone calls from Kiev residents and business owners close to the area where it was reported that planes and helicopters spraying "aerosolized medication" over the city during the time-frame between October 28 – October 30, 2009. Not only that but local businesses and retailers were "advised" to stay indoors during the day by the local authorities.

As if that is not enough, the government authorities also pushed the radio stations in Kiev to deny the reports. Online on forums, websites and blogs reports came in about eye witness accounts that confirms this. There was also reports of helicopters spraying aerosols not just over Kiev but Lviv, Ternopil and throughout Ukraine. The spraying was vehemently denied by the country's Office of Emergency Response. [\[Source\]](#)

This takes me back to when [reports surfaced](#) about gelatin-like rain pouring down over a small town of Oakville, Washington. The gelatinous like substance contained live bacteria that made an entire town sick for months.

This is a lot like what happened in the Ukraine, and is the likelier scenario on how this infection was spread. A bacterial pneumonic plague is of course much more virulent and lethal than the ordinary A-influenza virus that is spread from person-to-person via viral shedding.

Regardless of how this infection was spread, it should always be taken into account that that governments have been using their own populations as their own experimental lab for decades. It always seems to lead back to the military, government and big pharma using us for their own megalomaniacal reasons, the mainstream media is used to hype up the fear to sell vaccines.
